

GANESH KUMBHAR

Software Engineer | Backend & Distributed Systems | Python, FastAPI, React, PostgreSQL

Pune, Maharashtra, India | +91 9096378354 | ganeshhh2003@gmail.com | [LinkedIn](#) | [GitHub](#) | [gktechhub.com](#)

SUMMARY

Software engineer with ~2 years of experience building production systems end to end. Designed an **event-driven alerting pipeline (RabbitMQ, WebSockets, PostgreSQL)** that delivers fire, door and ATM alerts to a **40+ member** monitoring team across bank, retail and ATM sites, and consolidated **40+ repositories into one monorepo** serving **7,000+ intrusion panels**. Strong in secure API design (MFA/OTP, RBAC, VAPT remediation), bulk data processing and clean, maintainable code.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, SQL
- **Backend & Systems:** FastAPI, Django, Node.js, Express.js, REST APIs, WebSockets, RabbitMQ, SQLAlchemy
- **Frontend:** React.js, Next.js, Redux Toolkit
- **Databases:** PostgreSQL, MySQL, MongoDB, InfluxDB
- **Cloud & Tools:** AWS (S3, EC2), Docker, Git, GitHub, CI/CD, Jest, Postman, Webpack
- **Security:** JWT, MFA/OTP, RBAC, audit logging, VAPT remediation

WORK EXPERIENCE

Integrated Active Monitoring Pvt. Ltd. | Full Stack Software Engineer June 2026 – Present

- **Monorepo Consolidation:** Consolidated **40+ repositories into a single monorepo** for the SentriesAI intrusion platform (**7,000+ panels**), extracting shared pipeline logic and isolating panel-specific event processing.
- **Event Pipeline:** Built the Panel → AWS Receiver → PostgreSQL → Forwarder pipeline, splitting traffic into separate Event and Heartbeat RabbitMQ flows so critical alerts are not delayed by high-volume telemetry; implemented the Heartbeat consumer that persists panel health data to PostgreSQL.
- **Real-Time Alerting:** Engineered the Event RMQ → Consumer → Event Manager flow that validates and classifies events and pushes fire, door and ATM alerts over **WebSockets** to a CMS used by **40+ operators**.
- **Admin Portal & Bulk Import:** Developed React, FastAPI and SQLAlchemy modules, including a **9-sheet Excel import/export pipeline** with dropdown validation, preview, insert/upsert and **atomic commits**; fixed camera de-duplication and false “updated” detection, and authored a **60-page technical document** covering architecture, validation rules and schema.
- **Security & Audit:** Implemented MFA/OTP, password reset, account lockout, backend role/module authorization, VAPT fixes and **InfluxDB-based CRUD audit logging**.
- **Licensing System:** Extended the on-premise licensing service to support **multiple application types (Mobile and web) per license**, with independent device/metric limits, a signed .lic payload with nested app scoping, endpoint-level enforcement and a catalog-driven React license form.
- **Health-Alert Reliability:** Designed a redesign of the offline/restore alert worker with an explicit ONLINE/OFFLINE state machine, **outage incident tracking with probable-cause classification**, and **idempotent alerts** under concurrent workers, retries and out-of-order events.
- **Large-Scale Data:** Building a monthly per-organization image-count aggregation over a **900M+ document MongoDB collection**, optimized to run on existing indexes.

SevenMentor Corporate Services | Full Stack Developer Feb 2025 – May 2026

- **Platform Delivery:** Developed and maintained **5+ production MERN applications** (CMS, LMS, Billing, Placement) serving **5,000+ active users**.
- **End-to-End Ownership:** Owned features across the full MERN stack, from React user interfaces and Node.js/Express REST APIs to MongoDB data models, across the CMS, LMS, Billing and Placement platforms, taking work from development through to production maintenance.
- **API Design:** Designed and implemented RESTful APIs for efficient data flow while handling concurrent user requests.
- **Authentication & Authorization:** Implemented **JWT-based authentication** with **role-based access control (RBAC)** to protect APIs.
- **Email Workflows:** Integrated NodeMailer with OAuth2 to deliver account verification and password-reset flows.
- **Performance:** Improved application performance by **30–40%** by implementing server-side rendering (SSR) and optimizing rendering.
- **Reusable UI:** Built reusable UI components shared across multiple modules, reducing development time by nearly **25%**.

EDUCATION

B.Tech, Electronics & Telecommunication Engineering | Karmayogi Institute of Technology, Pandharpur Aug 2020 – Aug 2024
CGPA: 8.4 / 10

ACHIEVEMENTS

- HackerRank Gold Badges in Python and JavaScript (100+ coding challenges solved).
- Scored 90+ in SSC, HSC and Engineering Mathematics.
